

Broad Range Infrared Thermometer

Description:

The model N650 is a non-contact infrared thermometer designed for the measuring of high temperatures.

Features:

- Non-contact temperature measurements
- Adjustable emissivity from 0.1 to 1.00
- On/Off switchable laser sighting
- High 12:1 DS ratio
- Selectable Fahrenheit or Celsius display
- Wide temperature range from -58 to 1830 degrees F
- Temperature range: -58 to 1830 degrees F (-50 to 999 degrees C)

Applications:

- Electrical troubleshooting
- Automotive repair & maintenance
- Science experiments
- Measure terminals on circuits
- Air conditioning testing and maintenance
- Perform HVAC energy audits
- Test terminals or IC temperatures on PCBs
- Manufacturing processes of semiconductor technologies
- Food safety and processing
